Define the operating truth before automating the work.

Use

Select one matter stage or recurring exception. Complete the contract with operators, Client Services, Product, Engineering, the AI Architect, Quality, and control stakeholders. The result becomes the shared requirements record for workflow, detection, authority, telemetry, and portal translation.

1 · WORK BOUNDARY

Matter archetype

What repeatable kind of matter or service path is in scope?

Stage / handoff

Where does the work begin and end?

Outcome

What client and operating result must be protected?

2 · STATE DEFINITION

Element	Definition	System evidence	Owner	Client-safe translation
Expected state				
Observed state				
Completion				
SLA / forecast				

3 · EXCEPTION CONTRACT

Meaningful divergence

What difference between expected and observed state deserves action?

Detection method

Rule · threshold · classification · retrieval-assisted reasoning · agent workflow · other

False-negative cost

What happens when the system misses the exception?

False-positive cost

What is the burden of unnecessary intervention?

KLDiscovery Director of Product candidate

<https://russelldudek.github.io/KLDiscovery/>

Close the loop with explicit authority and evidence.

4 · HUMAN AUTHORITY

System may	Human must	Escalate when	Fallback	Decision evidence
Observe / classify	_____	_____	_____	_____
Recommend / draft	_____	_____	_____	_____
Route / execute	_____	_____	_____	_____

5 · MEASUREMENT CONTRACT

Flow Baseline: _____ Target evidence: _____ Cycle time / first touch / handoffs	Assurance Baseline: _____ Target evidence: _____ Quality / detection / escaped defects	Trust & leverage Baseline: _____ Target evidence: _____ SLA / client effort / automation / reuse
---	--	--

6 · PORTAL TRANSLATION

What the client needs to know Status: _____ Evidence / lineage: _____ Choice or action: _____ Next update: _____	What remains internal Operational detail: _____ Model signal / confidence: _____ Investigation notes: _____ Control rationale: _____
---	---

7 · RELEASE AND LEARNING DECISION

Gate	Evidence required	Owner	Result	Next decision
Technical	Integration, security, reliability	_____	Pass / Hold	_____
Operational	Usability, ownership, fallback	_____	Pass / Hold	_____
AI / quality	Evaluation, burden, risk	_____	Pass / Hold	_____
Client	Clarity, utility, disclosure	_____	Pass / Hold	_____

Portfolio disposition: Scale · Revise · Integrate · Standardize · Hold · Stop

Learning to retain: signal, cause, action, authority, outcome, threshold behavior, recurrence, adoption friction, and economic impact.
